One in eight women will be diagnosed with breast cancer during their lifetime.

MULTIDISCIPLINARY CARE MANAGEMENT
Breast cancer can be a complex disease. We use a multidisciplinary team approach to manage care so that every patient receives a personalized, coordinated and compassionate treatment plan that includes experts across many specialties.

BREAST CLINIC
We know that developing an effective treatment plan for breast cancer involves input from a variety of physicians and other specialists. Led by dedicated breast surgeons, Erika Rager, MD, MPH, and Juliana Meyer, MD, FACS, our multidisciplinary Breast Clinic brings together a team of leading breast cancer experts from surgery, medical oncology, radiation oncology, pathology, radiology, genetic counseling and other specialties. Patients see the entire team in one visit and at one convenient location, saving them several weeks of waiting and traveling to multiple office appointments. This approach ensures the best possible treatment plan is designed quickly in partnership with the patient and her family.

BREAST NURSE NAVIGATOR
As part of the clinic, patients diagnosed with breast cancer will see a nurse navigator who will review all health information and reports as well as schedule appointments. She will also provide access to clinical trials and help patients enroll should they qualify.

EXPERTS IN PREVENTION
The Franciscan Health Cancer Center provides a full range of breast health services, from screening, 3D mammography and minimally invasive biopsy techniques to advanced treatment for breast cancer.

TARGETED RADIATION THERAPY
Our radiation oncology team is one of the most experienced in the state. The team utilizes the most advanced technology available today, including Contura and Mammosite partial breast irradiation.

SURGERY
There are several doctors who perform breast cancer surgery, but do not specialize in breast cancer. Our physicians are dedicated breast surgeons who specialize and perform a large volume of breast cancer surgeries each year. Just as important to recovery, our plastic and reconstructive surgeons are experts in breast surgical oncology and participate as part of our Breast Clinic team to ensure the treatment plans provide the best cosmetic results and options.

RESEARCH AND CLINIC TRIALS
The Breast Clinic not only offers patients cutting-edge research and advanced cancer care, but also provides a variety of assistance and support for patients and their families.

One in eight women will be diagnosed with breast cancer during their lifetime.

“Research coordinators participate on the Breast Clinic team, ensuring participation in clinical research is considered for all patients. This allows us to offer our patients access to advanced treatment options not available with standard care.” – ERIKA RAGER, MD, MPH

Franciscan Health Breast Program provides comprehensive care for patients with breast cancer.

- High-risk breast clinic
- Advanced imaging
- Hereditary Cancer Program (genetic counseling)
- Partial breast irradiation therapy
- Plastic surgery
- Dedicated breast surgeons
- Research and clinical trials
- Breast nurse navigator
- Oasis boutique for wigs, prostheses and other personal care items

We understand that a diagnosis of breast cancer leads to a list of questions and you want answers now, not weeks from now. This is why we schedule appointments for newly diagnosed breast cancer patients within 72 hours.

To schedule an appointment or to contact our Breast Nurse Navigator, call (317) 528-1420.
